

## 5.5.3 Create the Branch

Before we get started, let's review the final GitHub issue, shown in the image below:

This GitHub issue encompasses a few small UI/UX improvements, so let's simply name the branch `touch-ups`.

To create the branch:

1. Make sure you're in the `develop` branch by typing:

```
git checkout develop
```

2. Create a feature branch named `touch-ups`:

```
git checkout -b feature/touch-ups
```
