

3.3.7 Save Your Progress with Git

Once you're happy with the shop feature, take a moment to save your progress with Git. Because the shop was an isolated feature/GitHub issue, we can also merge the branch into `develop`. Here's the complete workflow:

1. Use `git status` to verify the correct files were modified.
2. Use `git add -A` or `git add .` to stage any changed files.
3. Use `git commit -m "shop function"` to commit your changes.
4. Use `git push origin feature/shop` to push the branch to GitHub.
5. Use `git checkout develop` to switch branches.
6. Use `git merge feature/shop` to merge the new feature into the `develop` branch.
7. Use `git push origin develop` to push the updated `develop` branch to GitHub.
