

## 4.4.3 Create a New Git Branch

Let's set up our new feature branch in GitHub.

1. Check out into the `develop` branch:

```
git checkout develop
```

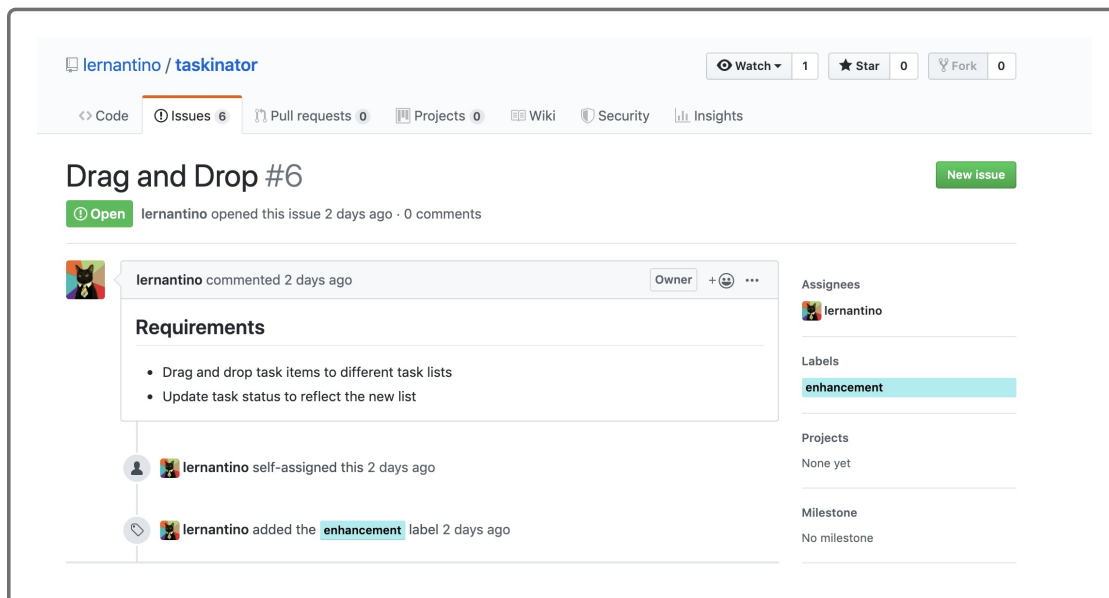

2. Make sure that `develop` is up-to-date with the the remote branch:

```
git pull origin develop
```

3. Create a new feature branch called `feature/drag`:

```
git checkout -b feature/drag
```

Now we have a place to work. Let's review the corresponding GitHub issue to see the requirements of this feature:

The first thing we need to do is to make our elements draggable.
