

5.2.3 Create a Git Branch

Let's review the GitHub issue pertaining to this feature one more time, then create the feature branch. See this image for the issue:

Because the issue pertains to Bootstrap, let's call the feature branch `feature/bootstrap`. We'll create it now from the command line:

1. Use `git branch` to ensure we're in the `develop` branch, as we want to build on that branch's code.
2. Create a new branch for this feature:

```
git checkout -b feature/bootstrap
```

3. Use `git branch` to double-check that we're in the new branch we just created.

Now that we've confirmed we're in the correct branch, let's get started!
