

## 5.5.1 Introduction

In the previous lesson, you further polished the Taskmaster app with some nicer due date handling, as the following screenshot shows:

The app is completely functional according to the client's specifications, but they'd still like to see some subtle improvements. In particular, they want to add a touch of automation for the due dates and to apply some more unique styles overall.

In this final stretch, you'll learn how to:

- Use JavaScript timer functions to schedule/automate logic.
- Use a font library to implement custom fonts.
- Use an icon library to implement font icons.
- Override default Bootstrap styles using custom CSS.
