

2.6.2 Preview

The CEO in particular has really been looking forward to an animated hover effect, as shown here:

We don't yet know how we'll implement this. We could push back and claim it's not possible, but we want to make our client as happy as possible. The time it takes to play around with different options will be

billable hours and provide many learning opportunities, so this challenge is a win-win situation!

Here's what we'll do in this lesson:

1. Experiment with different animation techniques.
2. Choose the best approach and prep the HTML and CSS.
3. Animate the trainers' hover states.
4. Make adjustments for mobile devices.
5. Deploy the webpage to production.
