

6.4.6 Save Your Progress with Git

We've accomplished an important step, so let's make sure to save, commit, merge, and push our work.

1. Verify that the correct files were modified with `git status`.
2. Stage and commit your changes with `git add` and `git commit`.
3. Push the branch to GitHub with `git push origin feature/list-issues`.
4. Switch branches with `git checkout develop`.
5. Merge the new feature into the develop branch with `git merge feature/list-issues`.
6. Push the updated `develop` branch to GitHub with `git push origin develop`.
7. Close the corresponding GitHub issue!

Before we move on, take a moment to go through a quick knowledge check:
