

4.2.9 Save Your Progress with Git

Our work on this GitHub issue is done, which means it's time to revisit the Git branch workflow:

1. Use `git status` to verify the correct files were modified.
2. Stage any changed files using `git add -A` or `git add .`
3. Commit your changes using `git commit -m "add ability to submit custom tasks"`.
4. Push the branch to GitHub using `git push origin feature/form-submit`.
5. Switch to the `develop` branch by typing `git checkout develop`.
6. Use `git merge feature/form-submit` to merge the new feature into the `develop` branch.
7. Type `git push origin develop` to push the updated `develop` branch to GitHub.

Lastly, close the corresponding GitHub issue and celebrate!

Final score: 100%
