# 1.2.2   Preview

In this lesson, you'll add content and style to the header and footer of the webpage.

When you're done, the landing page will look like this image:

The header and footer typically share similar content and style patterns, so it makes sense to do them both at the same time. They're also the "anchors" of most websites—meaning they appear on every page and hold two very important parts of any website: branding and navigation.

To accomplish this, you'll follow these steps:

1. Add content to the header. You'll add the navigation links for each section of the HTML page.

2. Learn CSS basics. You'll learn how Cascading Style Sheets (CSS) can make HTML look great. You'll learn its syntax, too.

3. Set up the style sheet. You'll create a style sheet to contain the CSS rules that will greatly improve Run Buddy's appearance.

4. Add initial CSS styles. You'll start writing rules for the header, and learn how the CSS Box Model controls element margins, borders, and padding.

5. Add detailed CSS styles. You'll use detailed CSS rules to make the header look just like the mock-up.

6. Set up the footer's HTML. You'll write HTML to create the footer's structure.

7. Design the footer. You'll use CSS rules to make the footer look just like the mock-up.

This is all best learned by doing, so let's get started!
