4.4.9   Save Your Progress with Git

It's time save your work in Git and GitHub:

1. Merge the `feature/drag` branch into the `develop` branch by adding, committing, and pushing the local feature branch to the remote feature branch:

   `git push origin feature/drag`

2. Check out into the `develop` branch.

3. Then use `git merge feature/drag` to merge the branches.

4. Update the remote repo by pushing the newest version of `develop`:

   `git push origin develop`

5. Now close this issue in GitHub.
