# 4.4.1   Introduction

At this point, the Taskinator looks done: we have a functioning application that lets us add tasks and edit them. In this lesson, we'll improve the user experience by adding the ability to change a task's status by dragging and dropping it into another task list.

Let's start by looking at where our project currently stands:

This looks great, but adding some intuitive design will enhance the user's experience. This is also an opportunity to learn how to build a very popular UI feature: drag and drop.
